tawilati.

GOOD FOOD, SMOOTHER SERVICE

Document	Brand guidelines
Version	1.0 · October 2026
Product	QR ordering and restaurant operations
For	Everyone designing, building or writing for Tawilati

01 · THE BRAND

A hospitality brand, powered by quiet technology

Tawilati connects guests, owners, kitchen staff and waiters around one table. A guest scans the QR code, orders from their phone and follows the order. The restaurant team runs menus, tables, the kitchen queue and the bill from the same system. The brand should feel like a well-run café: warm, calm and confident, with the technology in the background.

Elegant

Simple forms, generous space, nothing extra.

Warm

Cream, forest green and amber. Café materials, not chrome.

Trustworthy

Clear prices, clear status, a bill that adds up.

Connected

Guest, kitchen and waiter see the same order.

Approachable

Anyone can use it without instructions.

TAWILATI LOOKS LIKE

- A carefully designed hospitality brand
- Modern software that stays out of the way
- Timeless rather than trendy

TAWILATI NEVER LOOKS LIKE

- A generic AI startup or futuristic tech platform
- A traditional restaurant website
- A template with gradients, glow or glassmorphism

The cup and the signal

The mark puts a Wi-Fi signal over a coffee cup. The cup stands for hospitality and the dining experience. The amber signal stands for the connection between guests and the restaurant. Together they say: good service, made smoother by technology.

The cup · hospitality The signal · connection **tawilati.**

Lockups

Use the horizontal logo by default. Use the stacked logo where space is tall or centred, such as table cards and print. Use the icon alone only where the name already appears nearby or space is very small.

Horizontal · landing pages, desktop navigation, documents

Stacked · QR table cards, print, promotional assets

tawilati.

GOOD FOOD, SMOOTHER SERVICE

Reverse · cream lettering and cup, amber signal, on Forest Green only

Icon · compact navigation, app icon, favicon

Clear space

Keep a margin at least the height of the cup (**x**) on every side. Nothing else enters that space: no text, edges or other logos.

Minimum sizes

Below these sizes the signal arcs merge. Under 24 px use `favicon.svg`, which has two arcs and heavier lines.

Favicon
16 px

Icon
24 px

Horizontal
120 px wide

With tagline
200 px wide

Misuse

Always use the supplied SVG files. Never redraw, edit or decorate the logo.

Don't stretch or squash it

Don't rotate it

Don't recolour it outside the palette

Don't add shadows, gradients or 3D

Don't place it on low-contrast colours

Don't swap the mark or the typeface

Five colours, mostly cream

Forest Green

HEX #254D3B
RGB 37 77 59

Primary. Buttons, navigation, active states, key headings.

Sage

HEX #8BA88B
RGB 139 168 139

Secondary. Soft accents, tints, secondary buttons.

Cream

HEX #F8F5EC
RGB 248 245 236

Background. Pages, guest screens, large surfaces.

Amber

HEX #E5A45B
RGB 229 164 91

Accent, used sparingly. Logo signal, the period, highlights.

Charcoal

HEX #202B26
RGB 32 43 38

Text. Body copy, labels, tables, headings.

Balance

Most of any screen is cream or white. Green and charcoal carry the structure, sage softens it, and amber appears only in small doses.

60% cream and white · 25% forest green and charcoal · 10% sage · 5% amber

Text colours and contrast

Text must reach 4.5 : 1 against its background (WCAG AA). Amber and sage are too light for text on cream, so each has a darker text version. Use amber and sage as fills, borders and decoration; use the ink versions when the colour has to be a word.

SAMPLE	PAIR	TOKEN	RATIO	TEXT USE
Aa	Charcoal on Cream	`--text-primary`	13.42 : 1	Pass
Aa	Forest Green on Cream	`--brand-primary`	8.74 : 1	Pass
Aa	White on Forest Green	`--on-primary`	9.53 : 1	Pass
Aa	Muted on Cream	`--text-muted`	5.48 : 1	Pass
Aa	Charcoal on Amber	accent button	6.82 : 1	Pass
Aa	Amber ink on Cream	`--brand-accent-ink`	5.41 : 1	Pass
Aa	Sage ink on Cream	`--brand-secondary-ink`	5.11 : 1	Pass
Aa	Amber on Cream	`--brand-accent`	1.97 : 1	Decoration only
Aa	Sage on Cream	`--brand-secondary`	2.39 : 1	Decoration only

Order status

Order states have their own colours so the kitchen and waiters can tell them apart at a glance. Every badge also carries its word; colour is never the only signal.

New · Preparing · Ready · Served · Closed · Sold out

A serif for the welcome, a sans for the work

BRAND · PLAYFAIR DISPLAY

Aa

A smoother way to serve.

The wordmark, landing-page heroes, marketing titles and promotional headlines. Never body text or app UI.

INTERFACE · INTER

Aa

Table 12 · 3 items · $14.50

Everything inside the product: dashboards, navigation, buttons, forms, tables, menu items, prices, kitchen tickets and notifications.

TYPE SCALE

Display Playfair 700 · 56	A smoother way to serve.
H1 marketing Playfair 700 · 40	From the first scan to the final bill
H2 app Inter 600 · 28	Today's orders
H3 app Inter 600 · 20	Main dishes
Body Inter 400 · 16 / 1.55	Crisp romaine, parmesan and our signature dressing.
Small Inter 400 · 14	Your order has been sent to the kitchen.
Label Inter 600 · 12 · +0.12em	TABLE 12 · WAITING

DO

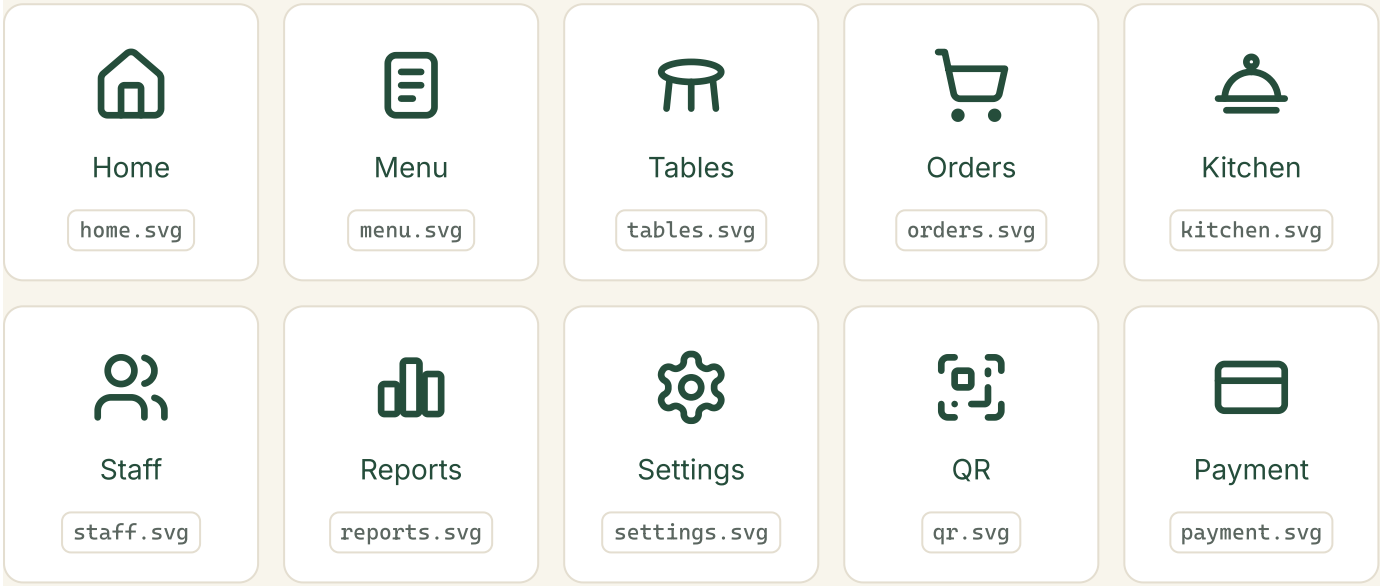

- Keep to the scale above and two or three weights.
- Set prices, table numbers and order numbers with tabular figures.
- Use uppercase only for small labels.

DON'T

- Use Playfair Display inside dashboards, tickets or forms.
- Set paragraphs in uppercase.
- Add a third typeface.

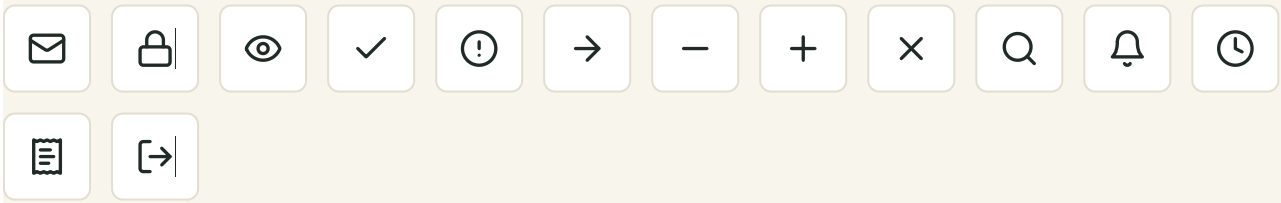

Clean line icons

Icons follow Lucide: a 24 px grid, 2 px strokes, rounded ends and corners. Four icons that Lucide lacks (menu, tables, kitchen, reports) are drawn to the same rules. Colour icons Forest Green or Charcoal.

Interface icons

Supporting icons for fields, alerts and controls, all from Lucide.

The Tawilati mark is not an icon. Never replace it with a library cup or Wi-Fi icon, and never put library icons inside the logo.

Calm, clear controls

Components use white cards on cream, light borders, soft 10 to 16 px corners and almost no shadow. Forest Green marks the one action that matters most on each screen.

Buttons

Primary for the main action (Submit order, Close tab). **Secondary** for supporting actions. **Accent** only for promotions and highlights, never as the main call to action. **Ghost** for cancel and back. Buttons are at least 48 px tall for touch.

0

Enter a rate above 0, for example 89,500.

Messages

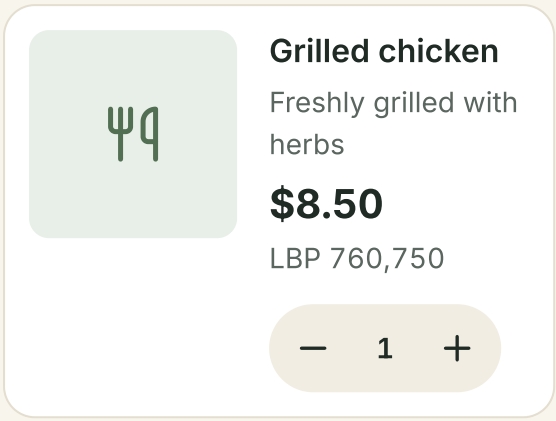

Order submitted!
Your order has been sent to the kitchen.

Lahm bi ajine is sold out
We removed it from your order. Everything else was sent.

Table 12
Opened 13:20 · 3 items

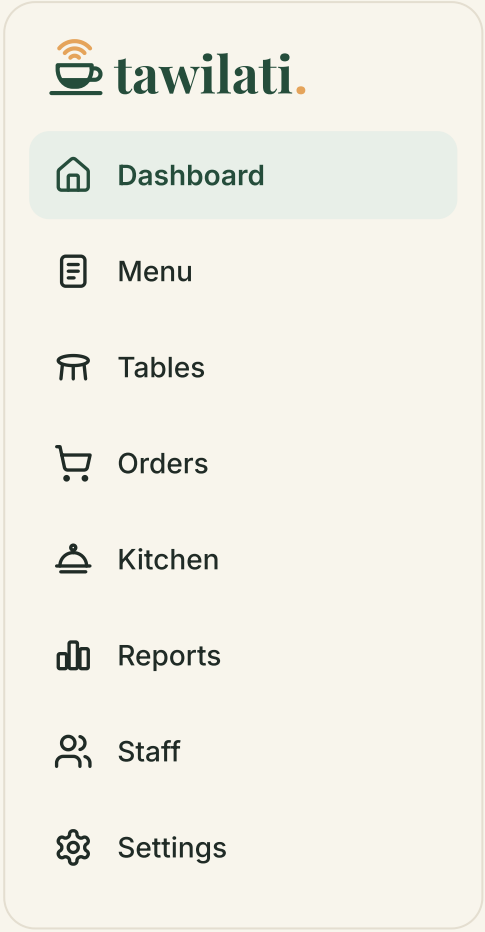

Ready

Menu item

Prices always show USD first, then LBP at the restaurant's current rate. Sold-out items stay visible, greyed, with the badge in place of the add control.

Sidebar navigation

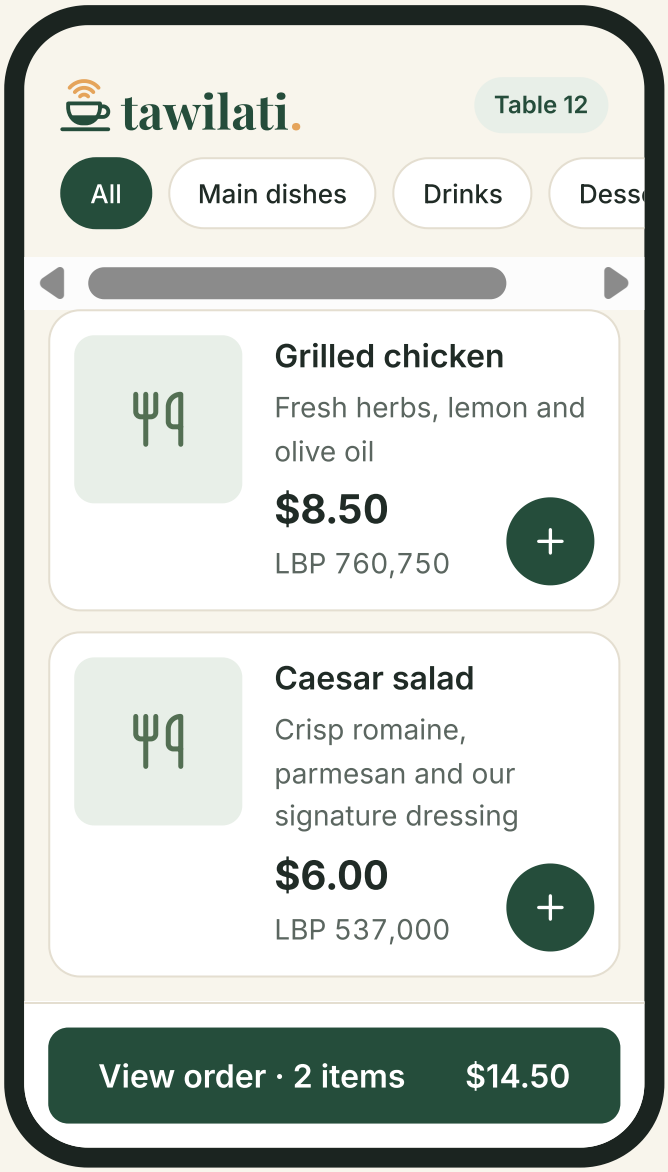

The current page gets a sage tint and Forest Green text. Owners see every item; waiter and kitchen accounts see only the screens their role allows.

From the table to the kitchen

QR table card. Stacked logo, one instruction, the table number. Print on cream card stock.

Guest menu. Mobile first, the table always visible, the running total one tap away.

Table 12

2 min ago · 13:42

New

1× Grilled chicken

1× Caesar salad
Dressing on the side

2× Fresh lemonade

Start preparing

Kitchen ticket. Large table number, quantities first, notes in amber ink, one big action. No decoration.

Tawilati · Orders

Real tables, real food

Photography should feel like a good afternoon in a café: natural light, warm wood, real plates and a little greenery. Food photos on the menu are square, shot from slightly above, on a calm background.

USE

- Authentic restaurant interiors in natural light
- Warm wooden textures and elegant table settings
- High-quality, honest food photography
- Subtle greenery and neutral materials

AVOID

- Robots, holograms and futuristic imagery
- Generic AI graphics or illustrations
- Oversaturated stock photos
- Busy backgrounds that compete with the food

Say it the way a good waiter would

Clear, friendly, professional, confident, helpful and simple. Write what the person needs to know or do next. Skip technical terms and error codes.
